# Amendments To The Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims:

 (Currently Amended) A method for increasing efficiency of interaction by an operator with data on a computer display, comprising:

presenting the data to the operator <u>in a plurality</u> of data fields on the computer display;

providing placing multiple instances of an on-screen control at different locations on the display in proximity to different ones of the fields for selection by the operator using a pointing device linked to the display; and

actuating the control responsive to the selection by the operator of any of the instances of the control on the display.

- 2. (Original) A method according to claim 1, and wherein actuating the control comprises receiving an input from the operator to indicate that the data are verified.
- 3. (Original) A method according to claim 2, wherein presenting the data comprises presenting results of optical character recognition (OCR) for verification by the operator.

# 4. (Canceled)

- 5. (Currently Amended) A method according to claim 4 claim 1, wherein the on-screen control indicates that the operator has finished processing the data in the plurality of the fields.
- 6. (Currently Amended) A method according to claim 4 claim 1, wherein placing the instances comprises interspersing the instances of the control between the data fields.
- 7. (Currently Amended) A method according to claim 4 claim 1, wherein providing the multiple instances comprises choosing the locations so as to minimize a traverse of the pointing device required to select one of the instances.
- 8. (Currently Amended) A method according to elaim 4 claim 1, wherein presenting the data comprises displaying in the fields characters from a document to which codes have been assigned so that the operator can verify that the assigned codes are correct.
- 9. (Original) A method according to claim 8, wherein displaying the characters comprises displaying results of optical character recognition (OCR) processing.

- 3 -

- 10. (Original) A method according to claim 9, wherein displaying the results comprises displaying together a plurality of the characters which have been assigned the same code by the OCR processing, with one of the characters in each of the fields.
- 11. (Original) A method according to claim 1, wherein providing the multiple instances comprises providing three or more instances of the control on screen.
- 12. (Currently Amended) Apparatus for operator interaction with a computer, comprising:
  - a display, arranged to present data to an operator;
- a processor, coupled to drive the display to present the data in a plurality of data fields on the display together with multiple instances of an on-screen control placed in proximity to different ones of the fields at different locations on the display; and
- a pointing device, coupled to the processor so as to enable the operator to select for actuation any of the instances of the on-screen control by the operator.
- 13. (Original) Apparatus according to claim 12, wherein selection of any of the instances of the on-screen control indicates that the data are verified.

- 4 -

14. (Original) Apparatus according to claim 13, wherein the data comprise results of optical character recognition (OCR) for verification by the operator.

#### 15. (Canceled)

- 16. (Currently Amended) Apparatus according to claim 15 claim 12, wherein the on-screen control indicates that the operator has finished processing the data in the plurality of the fields.
- 17. (Currently Amended) Apparatus according to claim 15 claim 12, wherein the instances of the control are interspersed between the data fields.
- 18. (Currently Amended) Apparatus according to claim 15 claim 12, wherein the locations of the multiple instances are chosen so as to minimize a traverse of the pointing device required to select one of the instances.
- 19. (Currently Amended) Apparatus according to claim 15 claim 12, wherein the data in the fields comprise characters from a document to which codes have been assigned so that the operator can verify that the assigned codes are correct.

- 5 -

- 20. (Original) Apparatus according to claim 19, wherein the codes are assigned to the characters by optical character recognition (OCR) processing.
- 21. (Original) Apparatus according to claim 20, wherein a plurality of the characters which have been assigned the same code by the OCR processing are displayed together, with one of the characters in each of the fields.
- 22. (Original) Apparatus according to claim 12, wherein the multiple instances comprise three or more instances of the control on screen.
- product for increasing efficiency of interaction of an operator with data on a computer display, comprising a computer-readable medium in which program instructions are stored, which instructions, when read by a computer, cause the computer to present the data to the operator in a plurality of data fields on the computer display while providing multiple instances of an on-screen control placed in proximity to different ones of the fields at different locations on the display for selection by the operator using a pointing device linked to the display, and to actuate the control responsive to the selection by the operator of any of the instances of the control on the display.

- 24. (Original) A product according to claim 23, wherein selection of any of the instances of the on-screen control indicates that the data are verified.
- 25. (Original) A product according to claim 24, wherein the data comprise results of optical character recognition (OCR) for verification by the operator.

## 26. (Canceled)

- 27. (Currently Amended) A product according to elaim 26 claim 23, wherein the on-screen control indicates that the operator has finished processing the data in the plurality of the fields.
- 28. (Currently Amended) A product according to <del>claim 26</del> <u>claim 23</u>, wherein the instances of the control are interspersed between the data fields.
- 29. (Currently Amended) A product according to claim 26 claim 23, wherein the locations of the multiple instances are chosen so as to minimize a traverse of the pointing device required to select one of the instances.
- 30. (Currently Amended) A product according to claim 26 claim 23, wherein the data in the fields comprise characters from a document to which codes have been assigned

- 7 -

so that the operator can verify that the assigned codes are correct.

- 31. (Original) A product according to claim 30, wherein the codes are assigned to the characters by optical character recognition (OCR) processing.
- 32. (Original) A product according to claim 31, wherein a plurality of the characters which have been assigned the same code by the OCR processing are displayed together, with one of the characters in each of the fields.
- 33. (Original) A product according to claim 23, wherein the multiple instances comprise three or more instances of the control on screen.
